Thursday's date, 5/7/09, is one of only six this century that will feature three consecutive odd numbers. (https://www.livejournal.com/away?to=http%3A/www.boston.com/news/odd/articles/2009/05/06/math_buffs_owed_by_odd_day/%3Fp1%3DWell_MostPop_Emailed3)

TAGS: [math](#)

This looks like a good idea.

...

This.

...

Little guy's not bad.

Gotta teach RHex to smear.

Unless one goes back and forth between the US and the UK. Then you get to do the whole "5/7/09" thing again in July.

Thursday's date, 5/7/09, is one of only six this century that will feature three consecutive odd numbers.

Only if you write the date the US way. We have to wait for the fifth of August...

You mean 5th of July, yes?

And how out of it was I, that I completely failed to notice the US-style date thing? Ahh graveyard shifts, I am **totally** over you.
